Name: Kritika Aryan

Registration Number: 25BCE10229

Branch: CSE Core

Year: 1st Year, 2nd Semester

Course Code: CSE0001

Date: 31 March 2026

Digital Literacy Project - Overview, Objectives AND Methodology

The Digital Literacy Project aims to develop essential digital skills among students, enabling them to effectively navigate and contribute to the modern technology-driven world. In today's digital era, proficiency in using online tools, communication platforms, and information systems is crucial for academic success and professional growth. This project focuses on building practical knowledge and hands-on experience with widely used digital tools and platforms.

The key objective of this project is to enhance students' digital competence in areas such as online collaboration, content creation, and professional communication. It introduces learners to tools like Google Docs, Sheets, and Slides for teamwork and productivity, along with platforms such as LinkedIn and GitHub for building a professional digital identity. Another important objective is to develop proper digital communication skills, including formal email writing and online etiquette. Additionally, the project aims to create awareness about cybersecurity, helping students understand potential online threats and adopt safe digital practices.

The methodology of the project is based on a practical and application-oriented approach. Students engage in hands-on activities such as creating presentations, designing digital content, and developing professional profiles. They also participate in exercises that simulate real-world scenarios, encouraging problem-solving, critical thinking, and effective use of digital resources. This experiential learning approach ensures that students gain both theoretical understanding and practical exposure.

In conclusion, the Digital Literacy Project plays a vital role in preparing students for the demands of the digital age. It not only improves technical proficiency but also enhances communication, creativity, and adaptability. By completing this project, students become more confident and capable of using digital technologies responsibly and effectively, thereby supporting their academic journey and future career growth.

TASK1 :- *Infographic Creation - Digital Literacy Project*

What I Made:

As part of the Digital Literacy Project, I created a one-page infographic to spread awareness about digital literacy among my peers. The infographic clearly explained the concept of digital literacy, highlighted useful digital tools for students, emphasized safe internet practices, and discussed the importance of maintaining a professional online presence. The content was organized into structured sections using simple and easy-to-understand language.

Tool Used:

The infographic was designed using Canva, an online graphic design platform. Canva provided a variety of templates, icons, and design elements that helped in creating a visually appealing and well-structured infographic. The use of icons, headings, and color contrast improved readability and engagement

Reflection (Learning Outcome):

This activity helped me understand the importance of visual communication in presenting information effectively. One of the main challenges I faced was balancing the amount of information with visual clarity, ensuring that the infographic was neither too crowded nor too minimal. Through this task, I learned how to simplify complex ideas and present them in an attractive and organized manner. It also improved my creativity, design sense, and ability to communicate key concepts concisely.

TASK 2 :-

Building a Digital Portfolio

Platforms Set Up:

As part of this task, I created professional profiles on GitHub, LinkedIn, and Kaggle to begin building my digital portfolio. Each platform was set up with basic details, profile information, and initial content to establish an online presence.

Purpose:

The main purpose of creating these profiles is to develop a strong and professional digital identity. GitHub is used to showcase coding projects, technical skills, and version control practices. LinkedIn serves as a platform for professional networking, sharing academic achievements, and connecting with industry professionals. Kaggle provides an opportunity to explore data science, participate in competitions, and improve analytical and machine learning skills. Together, these platforms help in presenting a well-rounded academic and technical profile.

Future Plans:

In the future, I plan to regularly update these platforms by adding new projects, certifications, and achievements. I aim to use GitHub for building and documenting real-world projects, LinkedIn for expanding my professional network and career opportunities, and Kaggle for continuous skill development in data science. Maintaining an updated and professional online presence will support my academic growth and enhance my career prospects.

TASK 3 :-

Coding and Collaboration Tools

Digital platforms play a crucial role in enhancing learning, productivity, and collaboration in the modern academic environment. As part of this task, I explored and utilized various tools that support both technical skill development and interactive engagement.

Platforms Used:

The primary platforms used in this activity were HackerRank, Google Forms, and Google Sheets. HackerRank was used for practicing coding problems and improving programming logic. Google Forms served as a tool to create and distribute an interactive quiz, while Google Sheets was automatically used to collect, organize, and analyze the responses in a structured manner.

What I Built/Practised:

I completed a beginner-level coding challenge on HackerRank, which helped strengthen my problem-solving abilities and understanding of basic programming concepts. This practice improved my logical thinking and familiarity with coding environments. In addition, I created a Digital Literacy Awareness Quiz using Google Forms, which included different types of questions such as multiple-choice and short answers. The responses collected through the form were automatically recorded in Google Sheets, demonstrating efficient data collection and management.

This activity highlighted how digital tools can be effectively used for both individual learning and collaborative tasks. It also showed how technology can simplify academic processes, making them more interactive, organized, and efficient.

TASK4 :-

Professional Communication and Email Etiquette

Effective communication is a fundamental component of digital literacy, especially in academic and professional environments. It requires clarity, formality, and proper structure to ensure that the message is conveyed respectfully and efficiently.

Communication Scenario:

As part of this task, I practised drafting professional emails for real-life situations. These included writing an email to request an assignment extension and another to apply for an internship opportunity. Each email was structured with a clear subject line, formal greeting, well-organized content, and a proper closing sign-off. In addition, I created a checklist of social media do's and don'ts to promote responsible and professional online behavior.

Key Learning:

This activity helped me understand the importance of tone, clarity, and structure in professional communication. I learned how to present requests politely and effectively while maintaining professionalism. Drafting emails for different scenarios improved my ability to adapt communication based on context. Creating the social media checklist also increased my awareness of digital responsibility and the impact of online behavior on one's personal and professional image. Overall, this task enhanced my confidence in formal communication and prepared me for real-world interactions in academic and career settings.

TASK5 :-

Cybercrime Awareness

Cybercrime awareness is essential in today's digital environment, where online transactions and digital interactions are a part of daily life. As part of this task, I studied a case related to UPI fraud, where scammers manipulate users into authorizing payments. Unlike traditional hacking, these scams rely more on psychological tactics and user unawareness. Victims are often misled into entering their UPI PIN, not realizing that it results in money being sent rather than received. Students and new users are particularly vulnerable to such frauds.

What Surprised Me:

The most surprising aspect was that cyber fraud does not always involve advanced technical skills. Instead, scammers exploit human behavior, trust, and lack of awareness. The fact that simply entering a UPI PIN can lead to financial loss, even without directly sharing sensitive information, highlighted how easily users can be tricked.

One Habit I Will Change:

After this activity, I will be more cautious while handling online payment requests. I will always verify the authenticity of requests before taking any action and avoid clicking on suspicious links. Additionally, I will ensure that I never share OTPs or confidential details with anyone and stay informed about reporting platforms like the National Cyber Crime Portal and helpline 1930.

This task emphasized the importance of awareness and responsible digital behavior in preventing cybercrime and ensuring online safety.

Conclusion and Resources Used - Digital Literacy Project

The Digital Literacy Project provided a comprehensive understanding of the essential skills required to function effectively in today's digital world. Through the five key tasks—infographic creation, building a digital portfolio, using coding and collaboration tools, practising professional communication, and developing cybercrime awareness—I gained both theoretical knowledge and practical experience. Each activity contributed to enhancing different aspects of digital literacy, including creativity, technical skills, communication, and online safety

Creating the infographic improved my ability to present information visually and concisely. Building a digital portfolio on platforms like GitHub, LinkedIn, and Kaggle helped me understand the importance of maintaining a professional online identity. The coding and collaboration task strengthened my problem-solving skills and demonstrated how digital tools like HackerRank, Google Forms, and Google Sheets can make learning more interactive and efficient. Practising professional communication taught me the importance of clarity, structure, and etiquette in formal interactions. Lastly, the cybercrime awareness task highlighted the risks present in the digital space and the need for responsible and cautious online behavior.

Overall, this project enhanced my confidence in using digital tools effectively and responsibly. It also prepared me for future academic and professional challenges by developing a well-rounded digital skill set.

Resources Used:

- Canva (for infographic design)
- GitHub, LinkedIn, Kaggle (for digital portfolio)
- HackerRank (for coding practice)

- Google Forms and Google Sheets (for quiz and data collection)
- Online articles and case studies on cybercrime awareness
- National Cyber Crime Portal and helpline 1930 (for reporting information)
